

DSA with Python - Complete Guide

Table of Contents:

1. Introduction to Data Structures and Algorithms
2. Python Basics for DSA
3. Arrays
4. Linked Lists
5. Stacks and Queues
6. Trees and Graphs
7. Sorting and Searching Algorithms
8. Recursion and Backtracking
9. Advanced Data Structures
10. String Algorithms
11. Algorithmic Problem Solving
12. Python for Data Science and AI
13. Project Work
14. Interview Questions and Solutions
15. Advanced Topics and Python Tricks

Sample Chapter: Arrays

Arrays are collections of items stored at contiguous memory locations.

Example:

```
def linear_search(arr, target):  
    for i, val in enumerate(arr):  
        if val == target:
```

```
return i
```

```
return -1
```

```
# Searching an element in an array using linear search.
```

Sample Chapter: Recursion

Recursion is a technique where a function calls itself.

Example:

```
def factorial(n):
```

```
    if n == 0:
```

```
        return 1
```

```
    else:
```

```
        return n * factorial(n - 1)
```

```
# Calculate factorial of a number recursively.
```
